Proofs and Programs Club

Starting

29 October 2026
17:00 - 19:00
and **Every Thursday**

Location:
Bedford Labs

Weekly meetings! Join at your leisure

PaPC is an informal forum for discussing programming languages, logic, formal methods, and related areas of computer science. It takes the form of self guided work (with some guidance from us).

Our meetings will focus on the **Lean theorem prover**, which has attracted growing interest in the mathematical and computer science communities. This is often connected with recent developments in AI-assisted theorem proving. We will explore Lean and its ecosystem, alongside broader questions around formalisation and automated reasoning.

The meetings are **open to anyone in the university community** interested in these topics. **No prior experience with Lean or theorem proving is required.**

Lean is an advanced functional programming language, it is very versatile and it is very expressive. It is interesting from the formal methods point of view, because it can **prove properties of programs** or formalise mathematical theorems.

Lately it has often appeared on the (math) news as it is used in combination with AI.

We hope to see you at the meetings!
